

Maintenance Mechanic

Job Summary:

Perform maintenance and repairs to a variety of machines within the facility, with limited direction and supervision, while being cost- and time-efficient.

Essential Functions:

- Work closely with Equipment Manager and Shop Foreman to coordinate maintenance of equipment.
- Analyze problems and malfunction issues with various equipment and machines
- Interpret company policies to workers and enforce safety regulations pertaining to company equipment
- Instruct all employees on safe operation, repair, and maintenance of shop fabrication machines and forklifts.
- Knowledge and experience to recommend measures to improve machine operations and life of machines.
- Recommend measures to improve use of employee time to increase efficiency of operations and production processes.
- Must be able to work with minimal supervision

Specialized Knowledge:

- Comprehensive knowledge of electrical, including 3-phase electrical up to 480 volts.
- Must have experience with overhead cranes and hoists.
- Must have experience with welders, forklifts, tractor trailers, and diesel trucks and engines.
- Have working knowledge of repair and maintenance of motors and controls, and hydraulics and pneumatics.
